*law enforcement software designed by law enforcement*

## IA TRAK

### Internal Affairs Records Management Software

IA Trak is our Internal Affairs Records Management solution designed specifically for the diverse needs of today's internal affairs and professional standards units. The system provides comprehensive tracking of all your internal affairs cases and complaints while helping you maintain compliance with the requirements of national and state accreditation standards. IA Trak was originally designed and developed based on feedback from instructors and students of the Institute of Police Technology and Management's Internal Affairs Investigations courses to provide a broad range of early intervention and personnel complaint review features.

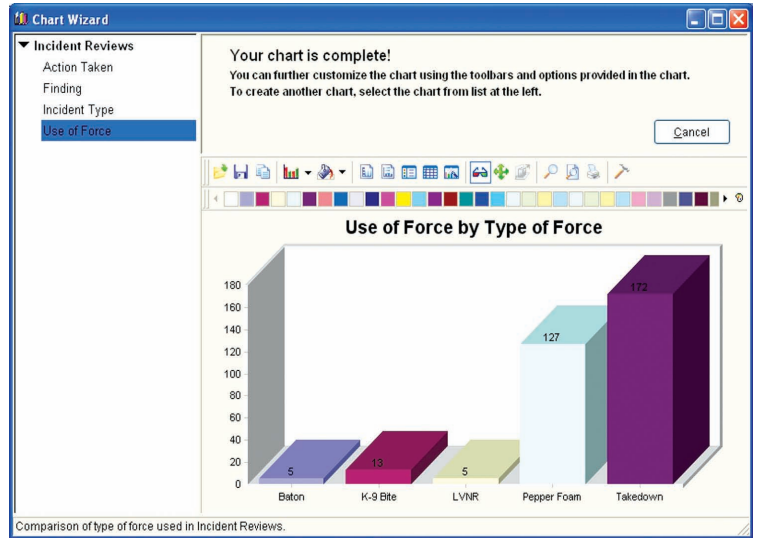

*You can see all details for an employee in one place*

In its fifth major version since 1989, IA Trak includes modules for recording internal affairs investigations and complaints as well as use-of-force incidents, pursuits, employee crashes, prisoner injuries and much more. A fully customizable early warning system provides alerts that can be configured to have investigators warned when an employee reaches a minimum threshold, possibly averting potential problems. Comprehensive reporting and charting features have been built into the system to provide proof of compliance with standards established by the National Commission on Accreditation for Law Enforcement Agencies as well as most state law enforcement accreditation standards.

Investigations can be logged and tracked from beginning to end in real time, maintaining a chronological order of all facets of the investigation time line. The system comes with over 100 built in reports and full color charts. Powerful searching and data mining features are integrated within every screen to provide a simple, intuitive means of producing easy to read and comprehensive reports. File attachments of virtually any type such as pictures, documents, video and audio files, can be linked to any record. Attachments can be stored on-line with the database or off-line on CD, DVD and other removable media.

**Key features include:**

- Standardized comprehensive reporting system with over 100 built-in reports and full color charts
- Extensive searching capabilities within every field and screen
- Reports and charts are produced based on search criteria (shown, right)
- Unlimited attachments such as pictures, documents, audio and video files linked to any record
- Attachment storage on-line with the data or off-line on CD, DVD and other removable media
- Configurable alerts for IA cases and incident reviews based on review date and status

- Completely configurable Early Warning System with alerts based on IA cases, use-of-force incidents, employee crashes, pursuits and an unlimited number of other categories (shown, left)
- Data exporting capability in seven different formats for use in other applications.
- Full color charts that can be saved and exported for use in other applications such as Microsoft Word
- Comprehensive investigative logging that maintains a chronological investigative timeline

<b>System Requirements:</b>	Dual Core 1.8 Ghz or higher processor recommended
	1GB RAM - 2 GB recommended
	60MB free HDD space for standard workstation installation
	15MB free HDD space for initial database installation - 300MB or more recommended
	Compatible with Windows Server 2000, 2003, 2008 and Novell Netware 4 and greater
